Minimum Military Grade: E-1
Maximum Military Grade: E-7

Summary of Duties:

Responsible for the Ground Support Equipment maintenance program, inventory control, and the identification and scheduling of preventive maintenance requirements for ground support equipment. Troubleshoots deficiencies and repairs flight critical equipment including lifting devices, turbine powered generators, towing devices and auxiliary power units.

Trouble-shoots, repairs; services; performs modifications on, and operates powered ground support equipment such as AC and DC power generators, air compressors, blowers, heaters, portable lighting units, deicers and non-powered equipment to include work stands, jacks, ramps, tow-bars, etc. Trouble-shoots equipment and determines the extent of repairs as well as the parts required. The authorized level of maintenance includes troubleshooting, tune-ups and adjustments of internal combustion and turbine engines, fuel controls, carburetors, clutch linkage, brakes and other mechanical links that utilize common hand tools and a variety of test equipment.

Performs required preventive maintenance and servicing of equipment including repairing and replacing tires, lubrication, oil changes, replacing air, fuel and oil filters, checking fluid levels; and adjusting or replacing ignition parts, hoses, v-belts, and other items. Keeps equipment clean and free from dirt, oil, grease and corrosion. Periodically observes the operation of equipment to detect problems. Maintains records and equipment log books.

Performs major system component overhaul/rebuild, repair/replacement and troubleshooting as needed, to include but not limited to, power-plant systems, brake systems, steering systems, hydraulic systems, diesel and gas systems, air systems, starting systems, ignition systems and electrical systems in addition to the following components, power-plant, brake, fuel, steering, hydraulic, air, starting, ignition and electrical system.

Performs other duties as assigned.

****Resume to supervisor must demonstrate**

Must have experience or training removing, adjusting, replacing, cleaning, and installing parts, components, and accessories. Experience which provided working knowledge of mechanical, electrical, and hydraulic theory applying

to powered support equipment and systems; and skill to replace, fit, install, and make adjustments. Experience which provided working knowledge of the makeup and operation of the various individual systems maintained and their interrelationships. Experience reading and interpreting parts lists, manufactures' repair manuals, diagrams, and electrical schematics.
